Challenge:

Safe operation with high visitor numbers

Built-in components:

Sanistar

Pumping medium:

wastewater

Field of business:

building services engineering

1 MILLION VISITORS: PUBLIC TOILET FACILITIES IN THE ALEXANDERPLATZ HAVE A RECORD NUMBER OF VISITORS

The original toilet facilities beneath Alexanderplatz date from the 1920s. Before operation was taken over by Wall AG, it had been converted several times. Thanks to a new floor plan, an elegant design, special lighting and the comfort of the installations, a bright, modern service facility was created. The design for the sanitary section is characterised by glass surfaces, white mosaic tiles, anthracite-coloured

stairs and a stone floor. From a central reception counter, the toilet areas with a total of 18 toilets and a nappy-changing area spread out in star formation.

SANISTAR LIFTING STATION PROVIDES TOP SAFETY

Compact sewage disposal units with integrated swing check valve, single or twin pump station.
